Scan Robotics – smart digital solution that strengthens your business

Streamlining information retrieval and eliminating repeated manual tasks without changing existing systems.

Benefits of Scan Robotics:

- Daily and automatic delivery of KPI key data
- Faster and accurate provision of information and data
- Increases operational efficiency
- Fewer errors and higher quality
- Lowers costs
- Strengthens compliance and safety
- Works 24/7
- Does not require changes to existing systems
- Removes trivial manual work
- Frees up resources for mission-critical tasks

<Scan Robotics>

Full automation of information processing

Together with Scan Transform, Scan Robotics can automate processes across the company. This applies to both the retrieval of relevant business information over the Internet, retrieval of information for use for the validation of documents and data, as well as the provision of information to an internal system or a database. This can be either direct or as a virtual user as if it were a human being.

Removes time-consuming routine tasks

In short, Scan Robotics is a smart digital tool that helps companies streamline the gathering of information and remove repeated manual time-consuming routine tasks. The robot can integrate into new and old systems without having to program or modify the existing ones.

Works flawlessly without taking breaks

The software-based robot can be set up to retrieve and insert information – anywhere and anytime, or it can be activated by a particular event. It can also be set up to act as a virtual user working 100 times faster, flawlessly and without taking breaks. User-friendly design of robots at Design Studio using Kapplets.

User-friendly design of robots at Design Studio using Kapplets

Use the robot any way you want – whenever you want

For example, the robot can be programmed to find and download on a daily basis the new rates or rules with which the company needs to be updated. Or it can be used to automate and streamline repeated input of large quantities of almost identical data into the company's systems. Processes that can be triggered or initiated by specific events at specified times or by ad hoc processes.

Scan Robotics will grow with you.

Scan Robotics is a flexible and scalable solution, which can be put gradually into use and adapted to your objectives for the digitisation and automation of business processes. One or more robots can thus work together in parallel or in a series of processes. They can also work indepen-

dently. The robots are also not locked into doing only one thing, but can perform other tasks at any time.

With Scan Robotics you can:

- Remove repetitive manual tasks such as copying, collecting and inserting information
- Integrate information from external and internal sources
- Scale robots across departments and functions
- Achieve a full digital process innovation of information and documents
- Scan Robotics comes with:
 - Design studio
 - Device automation
 - Management console
 - Kapplets

<Scan Solutions>

ScanSolutions helps companies and organisations to automate and digitise business processes. We have over 20 years' experience in advising and developing tailor-made digital solutions for a broad spectrum of private and public Danish companies. Recipient of the Danish Stock Exchange Gazelle Prize 2018. AAA Bisnode rating.
