<Scan Transform>

The solution for information-intensive businesses

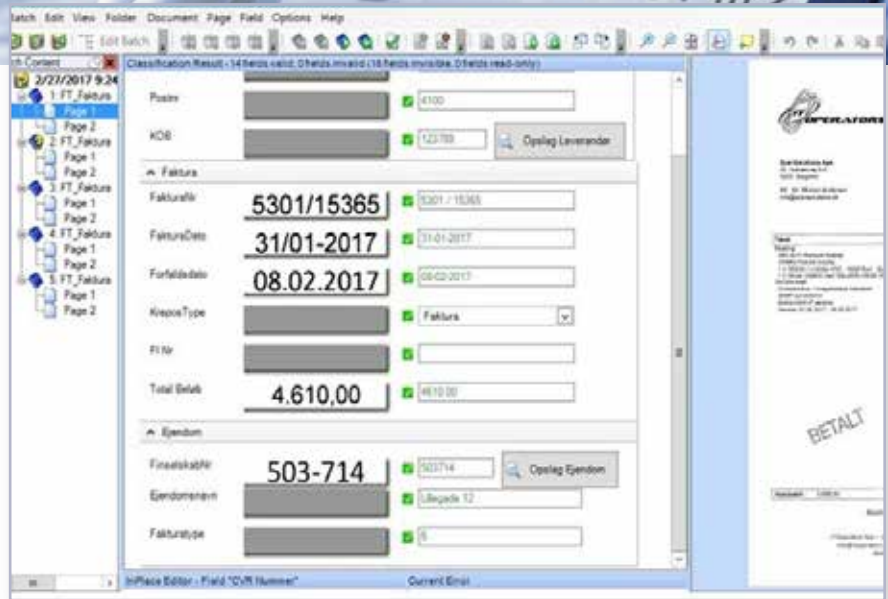

Scan Transform is the ideal solution for all types of information-intensive companies, which face a daily struggle to capture, process and deliver information for further processing in business systems. Working practices that cost time and money result in mistakes and bring challenges with -certainty and transparency. This applies, for example, to banks, insurance companies and other financial services, health, manufacturing, the state and public companies.

Strong and tested technology

Scan Transform builds on Kofax's strong and proven software products to capture, classify, extract and validate information and deliver it to business systems that include machine learning and artificial intelligence (AI). All types of documents regardless of source, design, time, place and business system, can be handled on one and the same technical platform. Thousands of organisations around the world today benefit from the strong functionalities of the solutions.

Scalable and flexible solution

Scan Transform can be scaled to all sizes and types of businesses

Processing of invoices in Scan Transform

The solution is extremely flexible and can be set up to cover both central and de-centralised needs of an enterprise set-up using both thick and thin web clients. It is also possible to set up testing, development and production environments with associated security.

Constantly-evolving technologies

Scan Transform and the technologies behind it are constantly evolving, and new functionalities and products come into being. Scan resolution is with you all the way. We follow developments in automation and digitisation with machine learning, AI, software robots and mobile technologies that realise the desire to capture, process and deliver information on-the-fly and act on this in real time.

Processes and sources:

- Handles all types of Information Processes - whether it is processing invoices, claims, sales orders, file scanning, mail, onboarding of customers, forms, document separation or other.
- Scans and interprets information from virtually all types of sources - whether it comes in the form of e-mail, PDF documents, TIF files, EDI / XML, ZIP or other formats.
- Supports most scanners and multi-function printers.
- Receives and transfers data to all types of underlying business systems.
