

<Scan Invoice>

Scan Invoice – Effective digital processing of invoices

Take your invoice processing to a new level.

Save time and free up resources to strengthen
your core business.

Benefits of Scan Invoice:

- One workflow for all types of invoices and sources
- AI and machine learning ensure constantly increasing data quality
- Import, interpret, verify and export data to your ERP solution
- Save time and free up resources to strengthen your core business.
- Reduce errors and dramatically increase the quality of invoice management
- High level of interpretation – minimal need for manual verification
- Can be expanded with software robot for further digitisation of workflows

<Scan Solutions>

<Scan Invoice>

Captures, interprets, verifies and loads data from all types of invoices

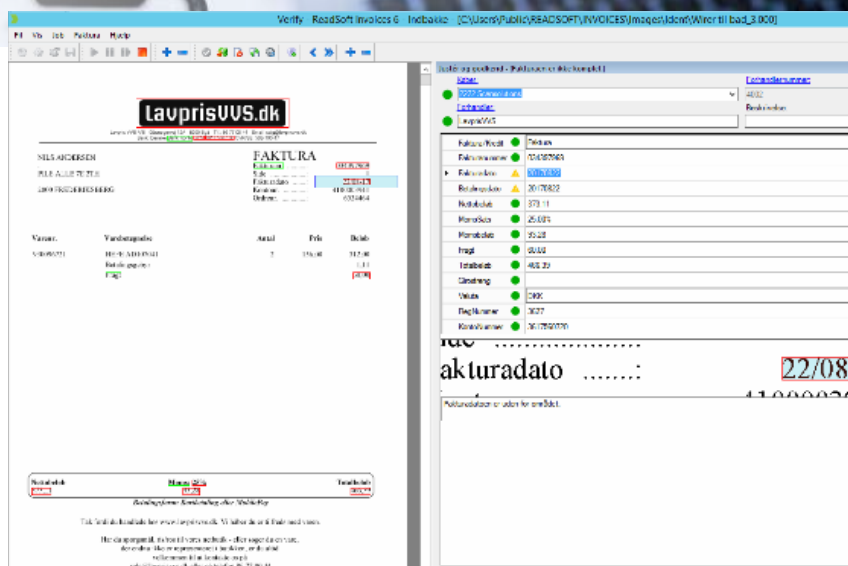

Manually entering and posting invoices can be a time-consuming and resource-intensive process, where errors can easily occur. Scan Invoice is an intelligent digital billing solution that captures, interprets, verifies, and loads data from any type of invoice – and from any type of source – directly to your ERP solution so that they can be approved, posted, and paid automatically.

Three different types of solutions

Scan Invoice takes the processing of invoices or P2P (purchase to pay) to a whole new level with three different strong solutions that are widely recognised in the market: ReadSoft Online, ReadSoft Invoices and Kofax Transformation. Each of the three solutions has been implemented by several thousand companies and organisations all over the world. Below you can see the features of the solutions as well as differences and similarities between the three types of solutions.

ReadSoft Online

ReadSoft Online is the latest P2P solution from Kofax. It is an intelligent out-of-the-box solution,

Screenshot of installation for validation of invoice.

optimised for invoice processing – with receipt, processing and export of data directly to the company ERP. Among the most important features are:

- Browser-based sky solution with Internet and system access
- Constant updates
- Shared knowledge base with other customers

ReadSoft Invoices

In principle, ReadSoft Invoices is the same solution optimised for invoice processing with the receipt, processing and export of data directly to the company's ERP, but with local installation and full control over definitions and integration.

- Local installation and maintenance

- Separate knowledge base
- Full control of definitions and integration with backend systems

Kofax Transformation (Scan Transform)

Kofax Transformation is a solution – designed to handle all types of documents including invoices with the receipt, processing and export of data directly to the company's ERP.

- Local installation and maintenance
- Separate knowledge base
- Full control of definitions and integration with backend systems
